

**ABSTRACT OF THE DISCLOSURE**

A voice avatar module is connected in a wireless terminal or a server for implementing a voice avatar for multiuser entertainment services allowing voice-based communication over a wireless network. The voice avatar module has a memory including a plurality of voice avatars. A user of the wireless device selects one of the voice avatars for  
5 modifying the user's voice. The user then enables the selected voice avatar so that all participants hear the modified voice of the user.
